COLLECTION INFORMATION

VOLUME OF COLLECTION:	2,096 original black-and-white photographs (9 x 11 inches, 21 x 28 centimeters or smaller); 263 sales drawings (most drawings 9 x 11 inches, 21 x 28 centimeters or smaller; 1 drawing in series @ 22 x 20 inches, 20 x 51 centimeters); 65 linen trace drawings (22 x 60 inches, 56 x 153 centimeters or smaller); 5 blueprints (22 x 48 inches, 56 x 123 centimeters or smaller); manuscript and printed material.
COLLECTION DATES:	1902–1931; 1965
PROVENANCE:	William M. Fronczek, Jr., M.D., McMurray, Pennsylvania, December 1999
RESTRICTIONS:	None
REPRODUCTION RIGHTS:	Permission to reproduce or publish material in this collection must be obtained from the Indiana Historical Society.
ALTERNATE FORMATS:	None
RELATED HOLDINGS:	None
ACCESSION NUMBER:	2000.0239

HISTORICAL SKETCH

The Cincinnati Car Corporation, a subsidiary of the Ohio Traction Company, designed and manufactured interurban railway cars, streetcars, and busses in Cincinnati, Ohio between 1902 and 1931. The company mainly supplied passenger and freight interurban cars, and Birney-type engines to city and commuter railway lines across the United States and into Canada. The business operated as the Cincinnati Car Company until a merger with the Versare Corporation of Watervliet, New York in December 1928. The new company was named the Cincinnati Car Corporation.

Versare made gas-electric busses and electric trolley-coaches. Oliver F. Warhus became vice president in charge of engineering and sales for the new company. Sales orders for busses in 1929 included gas-electric busses for the Cincinnati Street Railway Company. These may have been the only gas-powered vehicles built by the Cincinnati Car Corporation. It is not known if this model saw active service. Between 1929 and 1931 sales of trolley-coaches totaled nine cars. Customers included the Utah Light and Traction Company, the United Traction Company (Albany, New York) and the Louisville Railway Company.

In 1921 chief engineer Thomas Elliot designed the curved-side car, a lightweight model that used curved steel plates rather than conventional flat steel plates in body construction. The side plates and side sills, rather than the floor, bore the bulk of the weight load. Longitudinal floor supports were no longer needed, which made the cars lighter than conventional cars. Curved-side cars were also called "Balanced Lightweight Cars." The company completed production of the first curved-side cars for the Kentucky Traction and Terminal Company in February 1922. The Cincinnati Car Corporation dropped the curved-side design for interurbans after July 1929. The West Penn Railway Company ordered the last cars of this model, which were completed in December.

Interurban production continued until the company ceased operations in 1931. A number of factors contributed to the demise of the company, including the Great Depression and competition in the trolley-coach and gas-powered bus markets. Traditional customers that were able to avoid bankruptcy became judicious with their funds and purchased secondhand railway equipment rather than new cars. Other customers abandoned rail systems altogether in favor of busses and trolley-coaches, but the Cincinnati Car Corporation was not able to compete in this market. The corporation's assets were liquidated in 1938.

BIOGRAPHICAL SKETCH

Theodore Groene (1860–1911) and Louis Rombach operated photographic studios in Cincinnati from 1883. The studios were located at Third and Park Streets until 1888 when the business moved to 812–814 West Fourth Street. Rombach and Groene specialized in landscape and mercantile photography.

SCOPE AND CONTENT NOTE

The collection includes original black-and-white photographs, blueprint sales drawings, linen trace drawings, blueprints, and manuscript material created by and for the Cincinnati Car Corporation between 1902 and 1931. The collection also contains a company history, *Curved-Side Cars Built by Cincinnati Car Company*, written by Richard and Birdella Wagner in 1965.

The company is known among railway history enthusiasts as the "Cincinnati Car Company." The business used this name through most of its history, but archival description standards suggest that corporate collections should be named for the corporate entity that last created or used the material. The Cincinnati Car Corporation existed as an active entity from late 1928 to 1931, and during that time created photographs and sales drawings found in this collection. This collection guide refers to the company as the Cincinnati Car Company in relation to material created before December 1928.

William M. Fronczek, Jr., M.D. donated the collection to the Indiana Historical Society in 1999. Fronczek and other collectors, including Richard and Birdella Wagner and Walter Simpson, acquired the material over a number of years. The processor at the Indiana Historical Society arranged the material in five series according to format.

Series 1: Photographs. The photographs include interior and exterior views of completed interurban cars and cars under construction, truck assemblies, seat details, and trolley-coach and gas-powered busses. The interurban cars include Birney-type cars, passenger cars, freight cars, dining cars, locomotives, and curved-side cars. Identification on the photographs usually includes the shop or mechanical order number (stamped on the front or back of the image) and the name of the company that purchased or intended to purchase the equipment. Identification may be handwritten in pencil or ink, or typed in black ink. More than one company name may be written on the back of a photograph. A list of photographs appears on page 7 of this collection guide.

A stamp bearing the name of Cincinnati photographers Rombach and Groene appears on the back of approximately one-third of the photographs. Rombach and Groene, and possibly Cincinnati Car Corporation employees photographed the cars most often in what appears to be a train yard, possibly the yard at the assembly plant at Spring Grove and Mitchell avenues in Cincinnati. Other images were made inside the assembly plant. The photographs are stored in fourteen full-size document cases and one half-size document case in the Visual Collections storage area. The processor arranged the items in acid free folders according to order number.

Series 2: Sales Drawings. Sales drawings consist of 263 blueprint drawings made by the Cincinnati Car Corporation between 1914 and 1931. The designs represented in the drawings include plans for Birney-type cars, passenger cars, freight cars, dining cars, locomotives, and curved-side cars. Information on the front of the drawings includes the order number, the sales drawing number, type of car, details regarding the general

dimensions of the car, and the seating capacity. Other information on the back of the drawings includes the name of the purchasing railroad or railroads, the number of cars made for the order, names of electrical, air brake, and truck contractors, and the year that the order was completed. The series also includes a table (sixteen pages on blueprint paper) that lists the names of corporate customers, the order number associated with the customer, and number of cars ordered or built for the customer. This table is stored in Box 16, Folder 1. The drawings are stored in two OVA-size boxes in the Visual Collections storage area. Tables that list the drawing number, company name, item title, date, and folder location of each drawing begin on page 32 of this collection guide.

Series 3: Blueprint Drawings. The blueprint drawings consist of four drawings (22 x 48 inches) made between 1904 and 1910. The scale of the drawings suggests that they may have been intended for use during actual construction of the cars, rather than as sales drawings. These drawings are stored in "mammoth" size file drawers in the Visual Collections storage area. A table that lists the drawing number, company name, item title, date, and folder location of each blueprint drawing begins on page 52 of this collection guide.

Series 4: Linen Trace Drawings. The linen trace drawings consist of sixty-five engineering drawings of interurban cars designed by the Cincinnati Car Company between 1902 and circa 1913. The drawings arrived at the Indiana Historical Society in rolled bundles. Collectors had labeled the bundles "Cars Built" and "Cars Never Built." Employees of the Cincinnati Car Company created the traces by following the designs of the original blueprint drawings. The information on the traces includes the original blueprint number, title of the drawing (e. g. type of car), date of the original blueprint, and the date of the tracing. Dates on the drawings indicate that employees usually made the trace less than one week after the original blueprint was completed.

The processor at the Indiana Historical Society arranged the linen trace drawings in six folders, according to drawing number. For conservation reasons she placed smaller drawings (20 x 35 inches, 51 x 89 centimeters or smaller) out of sequence, designating these as the first items within their respective folders. The folders are stored in "mammoth" file drawers in the Visual Collections storage area. A table that lists the drawing number, corporation name, item title, date, and folder location of each drawing begins on page 53 of this collection guide. Information under the column "Item Title" was transcribed directly from the document and includes abbreviations and non-standard spellings of company names as annotated on the drawing.

Series 5: Manuscript and Printed Material. Manuscripts include contracts between the Dayton, Covington & Piqua Traction Company and the Cincinnati Car Company; and the Dayton, Covington & Piqua Traction Company and the Barney and Smith Car Company. Other manuscript material consists of a list of cars built by the Cincinnati Car Corporation. Collector Walter Simpson compiled this list. Printed material consists of the book *Curved-Side Cars Built by Cincinnati Car Company* by Richard and Birdella Wagner (Cincinnati: Wagner Car Company, 1965).

The spelling and style of corporate names, as annotated on the backs of the photographs and drawings, is not consistent from item to item. For example, the name "Columbus, Urbana & Western Railway Co." was also written as "Columbus, Urbana and Western Railway Company." The variant spellings and styles may reflect names used by Cincinnati Car Corporation employees, photographers, and collectors over the years. Also, a particular corporate name, as written on one item, may have been accurate when the drawing or photograph was made, but changed later in the company's history.

The processor established standardized spellings and styles for company names represented in this collection for the purpose of creating uniform folder headings and item titles. When possible she used the spelling and style of the corporate name shown on railway equipment in individual photographs. If no name was visible on the railway equipment, the processor chose the most commonly used spelling and style of the corporate name annotated on the back of the photographs. The processor adapted spellings and styles used in outside sources (see page 3 of this guide) if no common name could be discerned from the material. The standardized spellings may help researchers find the materials in the collection associated with a particular company, but the names as listed are not necessarily the legal names of those companies.

BOX AND FOLDER LISTING

Series 1: Photographs

Box 1: Cincinnati Car Corporation Photographs, Shop Orders 155–845

FOLDER	CONTENTS
1	Indiana Union Traction Co., Shop Order 155
